

Problem Solution Fit

Date	26/06/2026
Team Id	
Project Name	Smart Lender
Maximum Marks	5 Marks

Problem–Solution Fit (Brief):

Problem–Solution Fit is the process of ensuring that the proposed solution effectively addresses the identified customer problem. In the **Smart Lender** project, the solution uses Machine Learning to analyze applicant details and predict loan approval status, helping reduce manual effort, improve decision-making, and provide faster and more accurate loan eligibility predictions.

Section	Content
Problem Identified	Traditional loan approval is time-consuming and involves manual verification.
Target Users	Loan applicants, banks, and financial institutions.
Customer Pain Point	Applicants often experience delays and uncertainty regarding loan approval.
Proposed Solution	Smart Lender uses Machine Learning to predict loan approval based on applicant details.
Value Proposition	Provides fast, accurate, and data-driven loan eligibility predictions.
Key Features	Applicant data entry, data validation, ML-based prediction, and instant result display.
Expected Benefits	Reduces manual effort, saves time, improves consistency, and supports better decision-making.
Success Metrics	High prediction accuracy, fast response time, and improved user satisfaction.
Competitive Advantage	Automated prediction using Machine Learning with a simple and user-friendly interface.
Future Scope	Integration with banking systems, real-time credit score APIs, and enhanced AI models for better accuracy.
